Project Name	Cricket Player Performance Tracking Application: CRICKSTATS
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS

- "Calculating match-by-match strike rates and economy rates manually in scorebooks takes too much time."
- "I need a single platform where I can instantly view visual trends and graphs of a player's recent form."
- "Identifying specific batsman/bowler weaknesses helps in formulating precise tactical game plans."

THINKS

- "Manual entry in spreadsheets easily leads to calculation errors and data mismatch."
- "Will an automated tool provide predictive lineup suggestions and match-up advantages?"
- "Actionable performance analytics will save coaching time and accelerate player skill development."

PERSONA NAME

(Role / User Type)

Cricket Coach / Team Analyst

DOES

- Manually records individual statistics (runs, wickets, dot balls, extras) across paper sheets.
- Spends several hours sorting past match scorecards and video logs to assess form trends.
- Conducts player review meetings relying on fragmented records and personal recall notes.

FEELS

- Frustrated:** By repetitive, time-consuming manual tallying and delayed feedback cycles.
- Overwhelmed:** Managing massive historical performance data across squads and tournaments.
- Optimistic:** That an automated tracking dashboard will empower smarter, data-driven decisions.
