

Solution Requirements

Date	30 September 2026
Team ID	6ab2a945009dcca3125ab472
Project Name	Cricket Player Performance Tracking Application : CRICKSTATS
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users can securely register, log in, and log out using username/email and password.	High
2	Authorization levels	Admin can manage players, matches and records. Players/users can view and update permitted performance information.	High
3	External interfaces	The system connects with the database to store player profiles, match details and performance statistics.	Medium

4	Transactions processing	The system records and processes match-wise batting, bowling and fielding performances.	High
5	Reporting	Generates player performance reports, match summaries, batting statistics, bowling statistics and performance charts.	High
6	Business rules, etc.	Calculates statistics such as runs, wickets, batting average, strike rate, economy rate and total matches automatically.	High
7	Compliance to laws or regulations	Protects player information and ensures that stored personal data is handled securely.	Medium
8	<i>Other</i>	Provides player search, match history, performance comparison and dashboard features.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The application should quickly load player profiles, statistics and reports.	Main pages should load within 2–3 seconds .

2	Scalability	The system should support increasing numbers of players, matches and performance records.	Supports at least 10,000 player/match records .
3	Security & Data Privacy	User login credentials and player data must be protected from unauthorized access.	Passwords securely stored; role-based access implemented.
4	Reliability & Availability	The system should provide accurate statistics and remain available during normal usage.	Minimum 99% availability during operation.
5	Usability & Accessibility	The application should have a simple, clear and user-friendly interface for viewing cricket statistics.	Users should be able to access major features with minimal steps.
6	<i>Other</i>	The application should be easy to maintain, update and extend with new cricket statistics or features.	Modular design with maintainable database and code structure.
