

Technology Stack

Date	30 September 2026
Team ID	6ab2a945009dcca3125ab472
Project Name	Cricket Player Performance Tracking Application : CRICKSTATS
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	HTML, CSS, JavaScript	Used to create a simple, responsive and user-friendly interface for displaying player profiles, match statistics, dashboards and performance reports.

2	Backend / Server-Side	Python – Django	Handles application logic, user authentication, player records, match data and performance calculations efficiently.
3	Database / Data Storage	MySQL	Stores player details, match records, batting statistics, bowling statistics, fielding details and user information in a structured relational database.
4	Cloud / Hosting / Deployment	Render	Used to deploy and host the CRICKSTATS web application so that it can be accessed online.
5	Version Control & CI/CD	GitHub	Used to store source code, track changes, maintain versions and support collaboration during project development.

6	Third-Party APIs / Other Tools	Chart.js	Used to create graphical representations such as batting performance, bowling statistics, runs, wickets and performance trends.

Simple Technology Stack

Frontend: HTML + CSS + JavaScript

Backend: Python + Django

Database: MySQL

Charts/Reports: Chart.js

Version Control: GitHub

Deployment: Render
