Project Title	Cricket Player Performance Tracking Application : CRICKSTATS
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform cricket player performance tracking using Salesforce, boosting efficiency and accuracy. It tackles manual system inefficiencies, promising better operations, data-driven player selection, and improved team performance. Key features include automated Strike Rate calculation and real-time Reports & Dashboards for decision-making.

Project Overview	
Objective	The primary objective is to revolutionize the cricket performance tracking process by implementing Salesforce Lightning Platform, ensuring faster and more accurate player assessments and team selection.
Scope	The project comprehensively assesses and enhances the player performance tracking process, incorporating custom objects (Playerc, Match_Performancec), formula fields, validation rules, and real-time dashboards for a more robust and efficient system.
Problem Statement	

Description: Addressing inaccuracies and inefficiencies in the current manual score tracking system (notebooks/Excel) adversely affects operational efficiency, team selection accuracy, and match analysis quality.Impact: Solving these issues will result in improved operational efficiency, reduced manual errors, enhanced data-driven selection, and an overall enhancement in the player development process, contributing to team success and performance growth.

Proposed Solution

Approach: Employing Salesforce techniques to modernize and automate the tracking process —Creating the CRICKSTATS App within Salesforce to centralize all cricket performance data.Custom Objects: Playerc to store player details (Name, Age, Role) and Match_Performancec to capture match statistics (Runs, Balls, Date).Auto Strike Rate Formula: IF(Total_Balls*c = 0, 0, (Total_Runs*c / Total_Balls__c) * 100) to calculate strike rate automatically and avoid divide-by-zero errors.Validation Rules: Ensure data accuracy by validating required fields and preventing invalid numeric entries (e.g., Negative runs).Permission Set for Coach: Role-based access to allow coaches to view reports and player performance dashboards securely.Reports & Dashboards: Custom report for Top Scorer, Average Strike Rate, and player comparison dashboard to identify best performers based on runs and strike rate.

Key Features	1. Player ManagementCreate, view, edit and delete player profilesStores Player Name, Age, Role (Batsman/Bowler/All-rounder), Team, ContactCentralized database instead of notebooks2. Match Performance TrackingRecords Total Runs, Total Balls Faced, Match Date, Opponent TeamLookup relationship between Playerc and Match_PerformancecDaily entry for every match3. Automated Strike Rate CalculationAuto Formula Field: IF(Total_Balls*c = 0, 0, (Total_Runs*c / Total_Balls__c) * 100)No manual calculation, avoids divide-by-zero errorSaves 2-3 hours of manual work4. Data Validation & SecurityValidation Rules to prevent negative runs/balls and empty fieldsPermission Set for Coach - Coaches can only view reports, not edit playersRole-based access control5. Reports & DashboardsTop Scorer Report - Sorted by highest runsAverage Strike Rate Report - Team-wise performancePlayer Comparison Dashboard - Bar chart & Pie chartReal-time insights for selection6. CRICKSTATS Lightning AppCustom App with Navigation barTabs for Players, Match Performances, Reports, DashboardsMobile responsive via Salesforce Mobile App

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Intel i3 / i5 and above, No GPU needed (Salesforce is Cloud)
Memory	RAM specifications	4 GB Minimum, 8 GB Recommended
Storage	Disk space for data, models, and logs	500 GB HDD / 256 GB SSD (Only browser needed)
Software		
Frameworks Python frameworks Flask Libraries Additional libraries scikit-learn, pandas, numpy, matplotlib, seaborn Development Environment IDE Jupyter Notebook, pycharm Data		
Data	Source, size, format	Sample Cricket Data (Manual Entry), 50+ Players, 200+ Match_Performance_ _c records, Salesforce Custom Objects (CSV import)
