BONAFIDE CERTIFICATE

This is to certify that the project entitled “CRICKSTATS – Cricket Player Performance Tracking” is a bonafide work carried out by Ms. Kaviyarasi A bearing Roll Number: 22324UCSC029, submitted to the Department of Computer Science in partial fulfillment of the requirements for the award of the degree of Bachelor of Science (B.Sc.) in Computer Science during the Academic Year 2026–2027.

This project has been completed under the guidance of Mr. Ashok Kumar, Assistant Professor, Department of Computer Science, and has not been submitted previously for the award of any other degree or diploma.

Place: villupururam

Date: 26/9/2026

ACKNOWLEDGEMENT

We take immense pleasure in expressing our sincere gratitude to everyone who has guided and supported us throughout the successful completion of our project **“CRICKSTATS – Cricket Player Performance Tracking.”**

We express our heartfelt thanks to **Mr. Ashok Kumar, Assistant Professor, Department of Computer Science**, for his valuable guidance, constant encouragement, insightful suggestions, and continuous support during every stage of this project. His motivation and expert advice greatly helped us in completing the project successfully.

We extend our sincere gratitude to the **Head of the Department of Computer Science** for providing us with the opportunity, facilities, and academic environment necessary to carry out this project effectively.

We are grateful to all the **faculty members of the Department of Computer Science** for their valuable guidance, encouragement, and technical support throughout the development of this project. Their suggestions helped us improve the quality of our work.

We also wish to thank our **college management** for providing the infrastructure, computer laboratory, and Salesforce learning resources that enabled us to complete the project successfully.

Finally, we express our deepest gratitude to our **parents, friends, and project team members** for their unwavering support, cooperation, and encouragement. Their motivation and assistance, both directly and indirectly, played a significant role in the successful completion of this project.

User Story:

As a Salesforce Admin, I want to create a comprehensive player performance tracking application within Salesforce to capture and analyze detailed match-by-match information of cricket players. This application will include custom objects such as Player and Match Performance with carefully defined

fields and relationships to ensure data integrity and accessibility. By leveraging master-detail and lookup relationships, the application will enable robust tracking of individual and team performances, facilitate insightful reporting and analytics, and support the overall management of player statistics, thereby enhancing strategic decision-making and player development initiatives.

1. INTRODUCTION

1.1 Project Overview

CRICKSTATS – Cricket Player Performance Tracking is a Salesforce-based application developed to manage, track, and analyze the performance of cricket players on a match-by-match basis. The project provides a centralized digital platform where player details and match performance records are stored in an organized manner. By using Salesforce custom objects, relationships, reports, dashboards, and automation tools, the application enables accurate maintenance of cricket statistics and supports data-driven decision-making.

The system is designed for coaches, team managers, sports analysts, and administrators who require reliable and real-time player information. Instead of maintaining records in multiple files or spreadsheets, CRICKSTATS stores all player and match data in a secure cloud environment, making it easily accessible and reducing the chances of data loss or manual errors.

1.2 Purpose of the Project

The primary purpose of this project is to digitize cricket player performance records and improve the overall management of player statistics. The application helps users record detailed batting, bowling, and fielding performances for every match, automatically calculates important performance metrics, and generates reports and dashboards for better analysis.

The project also aims to automate repetitive data management tasks using Salesforce Flows, ensuring accuracy, consistency, and efficiency. With centralized data storage and real-time analytics, CRICKSTATS supports player development, team planning, and strategic decision-making in cricket performance management.

1.3 Objectives

- To create a centralized database for cricket player records.
- To maintain match-by-match performance details accurately.

- To automate player statistics using Salesforce automation.
- To generate reports and dashboards for performance analysis.
- To improve decision-making through real-time cricket analytics.

2. IDEATION PHASE

The Ideation Phase is the process of identifying a real-world problem, understanding user needs, and developing an effective digital solution. The objective of this phase is to replace manual record management with a cloud-based system that improves accuracy, accessibility, and overall efficiency. The proposed application was designed by analyzing the requirements of coaches, team managers, sports analysts, and administrators who regularly manage cricket player information.

2.1 Problem Identification

In many sports organizations, player performance records are maintained using notebooks, spreadsheets, or separate files. This manual approach often results in duplicate records, calculation errors, delayed reporting, and difficulty in tracking player progress over multiple matches. As the amount of data increases, managing and analyzing player statistics becomes more challenging.

2.2 User Needs

The primary users of the system require a platform that can securely store player information, record match performances, generate accurate statistics, and provide meaningful reports for performance evaluation. They also need quick access to player data without depending on manual calculations.

2.3 Proposed Solution

The proposed solution is a cloud-based player performance tracking application developed using Salesforce. The system centralizes player and match data, automates statistical calculations, and generates reports and dashboards for better decision-making. This approach reduces manual work, improves data accuracy, and provides real-time access to player performance information.

The Ideation Phase establishes a clear foundation for designing and developing a reliable, scalable, and user-friendly sports performance management system.

3. REQUIREMENT ANALYSIS

3.1 Customer Journey Map

The requirement analysis phase focuses on understanding the complete journey of users while using the player performance tracking system. The process begins with the user logging into the application, followed by entering player information and recording match performance details. After the data is stored, reports and dashboards are generated automatically, allowing coaches, managers, and analysts to evaluate player performance and make informed decisions. This workflow ensures an organized and efficient management of cricket statistics.

Customer Journey:

Login → Enter Player Data → Record Match Performance → Generate Reports → Analyze Results
→ Decision Making

3.2 Solution Requirements

Functional Requirements

The application provides several core functionalities required for effective player management. It allows user registration of players, match performance entry, automatic report creation, interactive dashboard generation, and workflow automation through Salesforce Flows. These features ensure that player records are maintained accurately and can be analyzed efficiently.

Non-Functional Requirements

The system is designed to be user-friendly, secure, reliable, and highly available. It provides an intuitive interface for coaches and managers, role-based access for data protection, accurate cloud-based data storage, fast report generation, and continuous availability for users. The application is also scalable, enabling future expansion to support multiple teams, leagues, and a larger volume of player records without affecting performance.

3.3 Technology Stack

The project is developed using **Salesforce Lightning** as the frontend platform, **Custom Objects** for data management, **Salesforce Flows** for automation, and **Reports & Dashboards** for analytics.

Salesforce Cloud serves as the database, providing secure storage and real-time accessibility of cricket performance data.

The requirement analysis confirms that the proposed system satisfies both user needs and technical requirements, providing an efficient solution for digital cricket player performance management.

3.4 Data Flow Diagram

Data Flow

User → Salesforce UI → Player Object → Match Performance → Reports → Dashboard

3.5 Technology Stack

Layer	Technology
Frontend	Salesforce Lightning

Analytics	Reports & Dashboards
Automation	Salesforce Flows
Backend	Salesforce Objects
Database	Salesforce Cloud

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The CRICKSTATS system effectively addresses the key challenges faced in traditional cricket performance management. Earlier, most player and match data were maintained using manual records, which were time-consuming and prone to errors. This issue has been resolved by implementing an automated system through Salesforce, which ensures accurate and efficient data entry and management. The problem of data loss, caused by improper storage and lack of backups, is overcome by using secure cloud storage that safely stores all information and allows easy retrieval. Poor analysis of player performance, due to scattered and unorganized data, is addressed through interactive dashboards that present clear visual insights and reports. Additionally, delays in accessing performance information and generating reports are eliminated by providing real-time reporting features, enabling users to make faster and more informed decisions. Thus, CRICKSTATS successfully bridges the gap between existing problems and modern technological solutions.

Problem-Solution Fit

4.2 Proposed Solution

Description

CRICKSTATS provides:

- Custom objects (Player, Match Performance)
- Master-detail relationships
- Roll-up summaries
- Lightning App
- Automated flows
- Interactive dashboards

Key Features

- Centralized database
- Live statistics
- Secure access
- Scalable design
- Easy reporting

4.3 Solution Architecture

Architecture Layers

- Presentation Layer (Lightning UI)
- Application Layer (Flows, Logic)
- Data Layer (Objects)
- Analytics Layer (Reports)

The Solution Architecture represents the overall design of the player performance tracking system. It is divided into four layers to ensure efficient data management, automation, and reporting. Each layer performs a specific function while working together to provide a complete Salesforce-based solution.

The Presentation Layer provides the Lightning user interface for entering and viewing player records. The Application Layer manages business logic and automated workflows using Salesforce Flows. The Data Layer stores player and match information through custom objects and relationships. Finally, the Analytics Layer generates reports and dashboards that help coaches and managers analyze player performance and make better decisions. This layered architecture improves accuracy, scalability, and the overall efficiency of the system.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- Agile-based execution
- Object creation → automation → reporting
- Sprint-wise development

Product Backlog, Sprint Schedule, and Estimation

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint -1	Developer Setup	USN-1	As an admin, I want to create a Salesforce developer account so that I can configure and deploy the CRICKSTATS system.	1	High	Member1
Sprint -1	Data Modeling	USN-2	As an admin, I want to create Player and Match Performance objects so that player and match data can be stored systematically.	3	High	Member2
Sprint -2	Navigation	USN-3	As a user, I want separate tabs for each object so that I can easily navigate and manage records within the application.	3	High	Member3
Sprint -2	UI Design	USN-4	As a coach, I want a dedicated Lightning App so that all performance tracking features are accessible from one dashboard.	3	High	Member4

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint -2	Data Structure	USN-5	As an admin, I want to create player and match fields so that complete performance details can be captured accurately.	5	Medium	Member1
Sprint -2	Data Structure	USN-6	As a user, I want customized page layouts so that only relevant fields are displayed during data entry.	5	High	Member2
Sprint -2	Automation	USN-7	As a system, I want to validate player and match inputs so that incorrect data entries are prevented.	3	High	Member4
Sprint -3	Automation	USN-8	As a system, I want automated flows to update player statistics so that performance data remains accurate.	5	High	Member1

Project Tracker, Velocity & Burndown Chart

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint -1	20	6 Days	01 sept 2026	06 sept 2026	20	06 sept 2026

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint -2	20	6 Days	08 sept 2026	13 sept 2026		13 sept 2026
Sprint -3	20	6 Days	15 sept 2026	20 sept 2026		20 sept 2026
Sprint -4	20	6 Days	22 sept 2026	27 sept 2026		27 sept 2026

6. PROJECT DEVELOPMENT PHASE

The Project Development Phase describes the practical implementation of the CRICKSTATS NM.pdf application in Salesforce. The project was developed using an Agile approach, where each milestone was completed step by step to build a fully functional player performance tracking system. During this phase, custom objects, relationships, automation, reports, and dashboards were created to manage cricket player statistics efficiently.

Project Flow

1. Milestone 1: Creation of Developer Account
2. Milestone 2: Object Creation
3. Milestone 3: Tabs
4. Milestone 4: The Lightning App
5. Milestone 5: Fields & Relationships
6. Milestone 6: Roll-up Summary
7. Milestone 7: Flows

Implementation Overview

The development begins with creating a Salesforce Developer Account and configuring the development environment. Next, the Player and Match Performance custom objects are created, followed by custom tabs and the CRICKSTATS Lightning App for easy navigation. Fields, relationships, and roll-up summary fields are then implemented to calculate player statistics automatically. Finally, Salesforce Screen Flows are developed to display players based on the selected team and provide an interactive user experience. This systematic implementation results in a secure, centralized, and efficient cricket player performance tracking application.

Implementation

Milestone 1 - Salesforce developer account creation :

Activity 1: Creating Developer Account:

The screenshot displays the Salesforce Developer Edition registration page. On the left, a blue sidebar contains the text "Build for the Agentic Enterprise. Sign up for your Developer Edition." followed by a list of benefits: "The entire Salesforce platform - exposed as APIs, MCP tools, and CLI commands. Build apps, ship agents, and let coding agents do the heavy lifting with Salesforce Headless 360." and five bullet points: "Build AI agents with Agentforce, grounded in your data with Data 360", "Connect Claude Code, Cursor, or Codex to your org with hosted MCP", "Build in the browser with the Agentforce Vibes IDE - no setup required", "Drag-and-drop when you want it, Apex when you need it", and "60+ MCP tools and 30+ coding skills, ready out of the box". The main content area is white and titled "Sign up for your Developer Edition". It describes the offer as "A free Salesforce Platform environment with Agentforce and Data 360". Below this, there are three dropdown menus: "Country/region" (set to India), "State/province" (set to Tamil Nadu), and "Work email" (set to akaviyarasi25@gmail.com). A checkbox for "I agree to the Main Services Agreement – Developer Services, Salesforce Program Agreement, and API Terms of Service" is checked. Below the checkbox, there is a note about the free trial and a disclaimer. At the bottom, there is a link to the "Privacy Statement".

**Build for the Agentic Enterprise.
Sign up for your Developer Edition.**

The entire Salesforce platform - exposed as APIs, MCP tools, and CLI commands. Build apps, ship agents, and let coding agents do the heavy lifting with Salesforce Headless 360.

- ✓ Build AI agents with Agentforce, grounded in your data with Data 360
- ✓ Connect Claude Code, Cursor, or Codex to your org with hosted MCP
- ✓ Build in the browser with the Agentforce Vibes IDE - no setup required
- ✓ Drag-and-drop when you want it, Apex when you need it
- ✓ 60+ MCP tools and 30+ coding skills, ready out of the box

Milestone 3 - Tabs

Activity 1 : Custom tabs creation

SETUP Tabs

Custom Tabs [Help for this Page](#)

You can create new custom tabs to extend Salesforce functionality or to build new application functionality.

Custom Object tabs look and behave like the standard tabs provided with Salesforce. Web tabs allow you to embed external web applications and content within the Salesforce window. Visualforce tabs allow you to embed Visualforce pages. Lightning Component tabs allow you to add Lightning components to the navigation menu in Lightning Experience and the mobile app. Lightning Page tabs allow you to add Lightning Pages to Lightning Experience and the mobile app.

Action	Label	Tab Style	Description
Edit Del	Match Performances	 Balls	
Edit Del	Players	 Balls	

This screenshot shows the Custom Tabs page in Salesforce Setup. The Players and Match Performances tabs are created to provide easy navigation within the application.

This screenshot shows the Player Flow added to the Home Page of the Lightning App. The flow is activated as the default home component, allowing users to view player information directly from the home page.

7.FUNCTIONAL & PERFORMANCE TESTING

During the testing phase, screenshots were captured from the Salesforce Lightning user interface to verify the correct functioning of all implemented features in the CRICKSTATS system. These include record creation for Player and Match Performance objects; validation rule checks for mandatory fields, score limits, and input constraints; verification of record type behavior for Domestic and International match categories; and flow execution for automatic updating of player statistics and

data consistency. The functionality of roll-up summary fields was also tested to ensure accurate calculation of total runs, wickets, averages, and performance metrics.

In addition, system performance was evaluated by monitoring response time during data entry, report generation, and dashboard loading. The application was tested under multiple user interactions to ensure stable performance without delays.

Screenshots of generated reports and interactive dashboards were documented to confirm accurate data visualization, real-time updates, and reliable performance tracking. These testing activities ensured that the CRICKSTATS platform met both functional and performance requirements and was ready for deployment.

The Functional and Performance Testing phase was carried out to verify that all features of the application work correctly and produce accurate results. Player records, match performance details, roll-up summaries, screen flows, reports, and dashboards were tested to ensure proper functionality. The application was also evaluated for response time, data consistency, and real-time performance updates.

Testing Result

The application successfully created and managed player records, automatically updated performance statistics through roll-up summaries, executed screen flows correctly, and generated accurate reports and dashboards. The system performed efficiently without delays, confirming that both the functional and performance requirements were satisfied.

8. ADVANTAGES & DISADVANTAGES

Advantages

- Centralized system
- Real-time analytics
- Secure platform
- Scalable design
- Reduced manual work

Disadvantages

- Requires Salesforce license
- Internet dependency
- Limited offline access

9. Conclusion:

CRICKSTATS successfully implements a cloud-based cricket performance tracking system using Salesforce. The system automates data management, improves reporting accuracy, and supports informed decision-making.

The project demonstrates practical application of SDLC, Agile methodology, and CRM-based development.

10. FUTURE SCOPE

- Mobile application integration
- AI-based performance prediction
- Video analysis integration
- Player ranking system
- Public statistics portal
- Multi-league support

11. APPENDIX

Appendix A – Salesforce Objects & Fields

This appendix contains the list of Salesforce objects and custom fields used in the project.

Appendix B – Manual Match Statistics

This appendix includes the sample player and match statistics used for testing the application.

Appendix C – Flow Configurations

This appendix contains the flow configuration details used to implement the player performance tracking process.

THANK YOU
